

TECHMAN XC100 NVMe SSD

VMware Ready Announcement

Sep. 8, 2016

TECHMAN SSD, the trusted and professional SSD maker for high performance storage, today announced that its latest PCIe/NVMe SSD product, TECHMAN XC100 series, has successfully achieved VMware Ready status. This designation indicates that, after a detailed validation process, TECHMAN XC100 has reached VMware's highest level of endorsement to support vSphere/ESXi 6.0 and can be found on VMware's HCL :

"To fulfill customers' demands is always TECHMAN SSD's top priority. With the VMware Ready certification, customers deploying TECHMAN XC100 will experience very impressive improvement on IOPS performance in VMware environments."

TECHMAN R&D Director Ilong.Hsiao

Virtualization requires high IOPS. However, conventional storage devices such as HDD create bottlenecks on IOPS performance. With deployment of Flash based devices, those bottlenecks will be overcome. And with PCIe/NVMe Flash based devices, IOPS will be further boosted to fully utilize the computing power. Now TECHMAN XC100 not only eliminates the IOPS bottlenecks but also achieves VMware Ready, meaning that the compatibility with VMware of XC100 is no more a concern to customers.
